

W E T E E

DELIVER ANY APP IN THE WAY OF WEB3

Existing Problems

Web2 applications are typically centrally managed,
with users lacking autonomy over their personal privacy information

Frequent data breaches in Web2
have led to serious losses for individuals and organizations

Traditional blockchain smart contracts are not a panacea
They have limitations in supporting private data, games, AI, metaverse, etc

Web3 lacks software infrastructure similar to Web2
It cannot meet the diverse deployment needs of Web3 applications,
which restricts the development of Web3 applications

Scenario

Decentralized deployment environment for Web3 application backend services

Low-latency, high-computing performance deployment environment required by GameFI

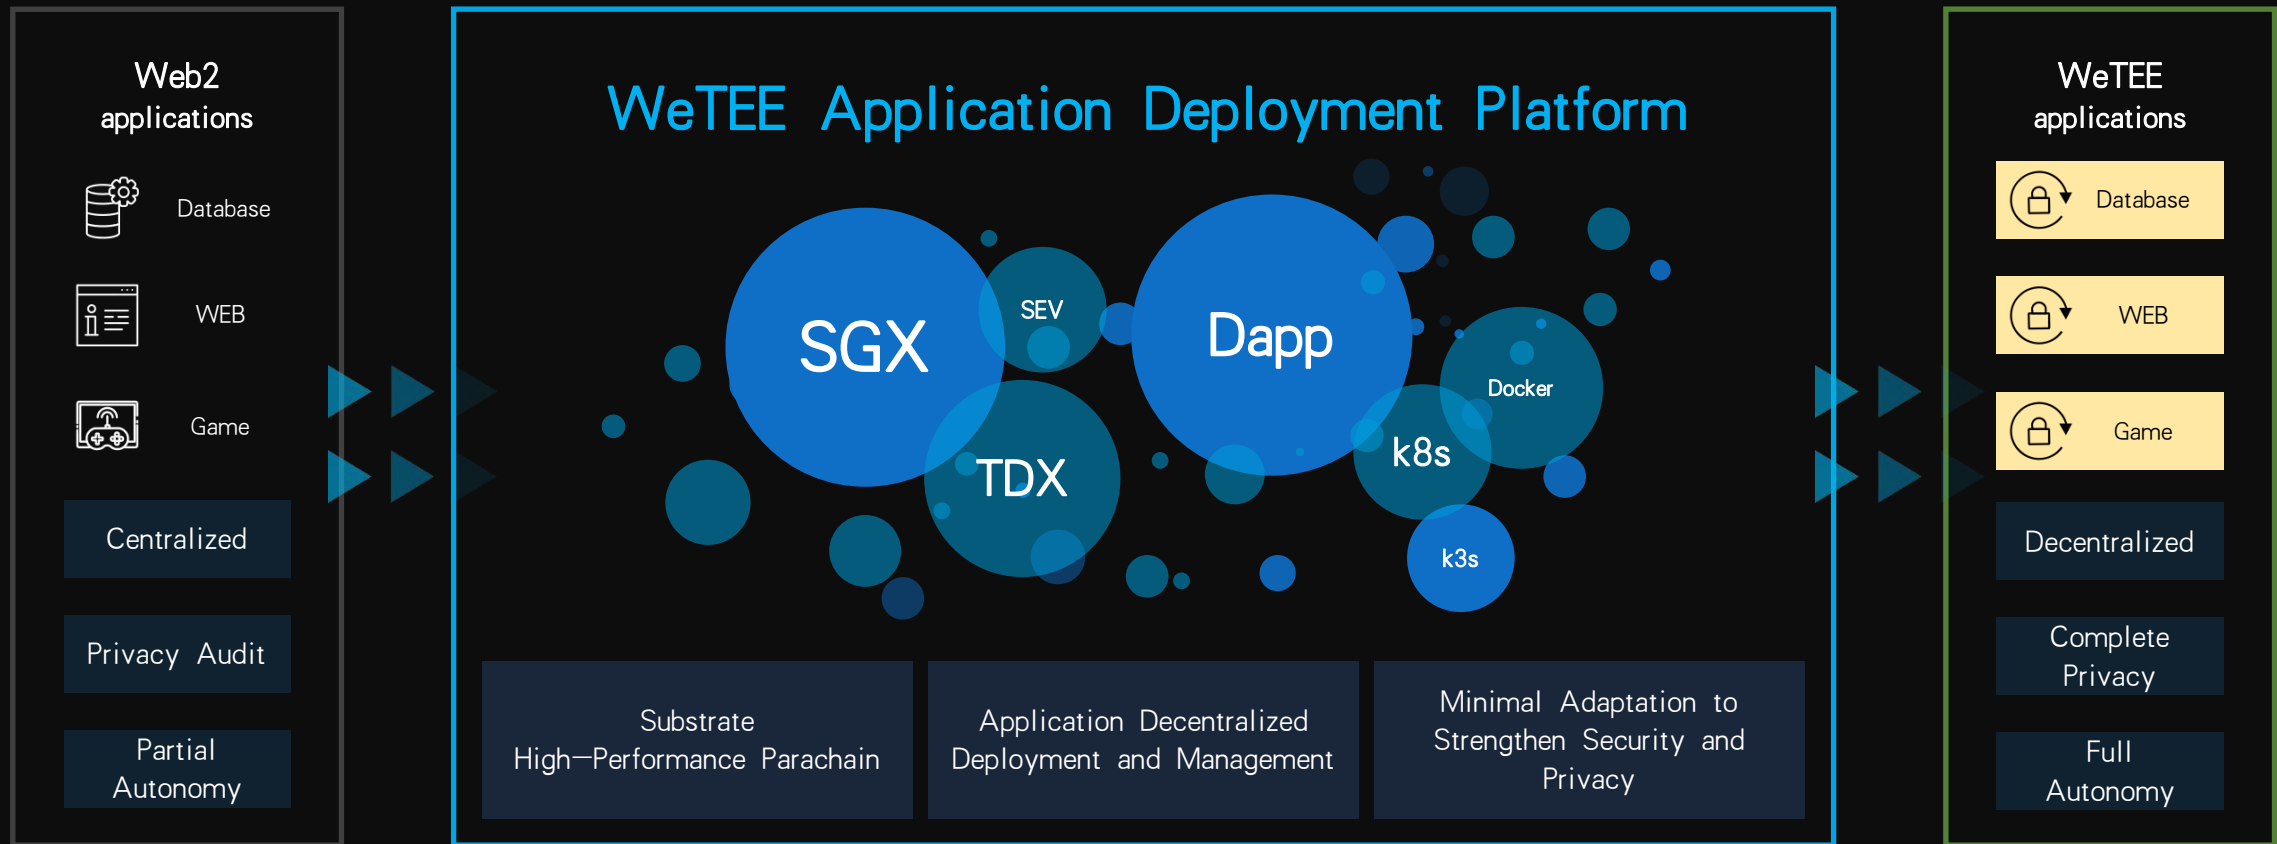

Secure and reliable Web2.5 deployment environment

Deployment environment for ink! smart contracts based on Substrate

Project Features

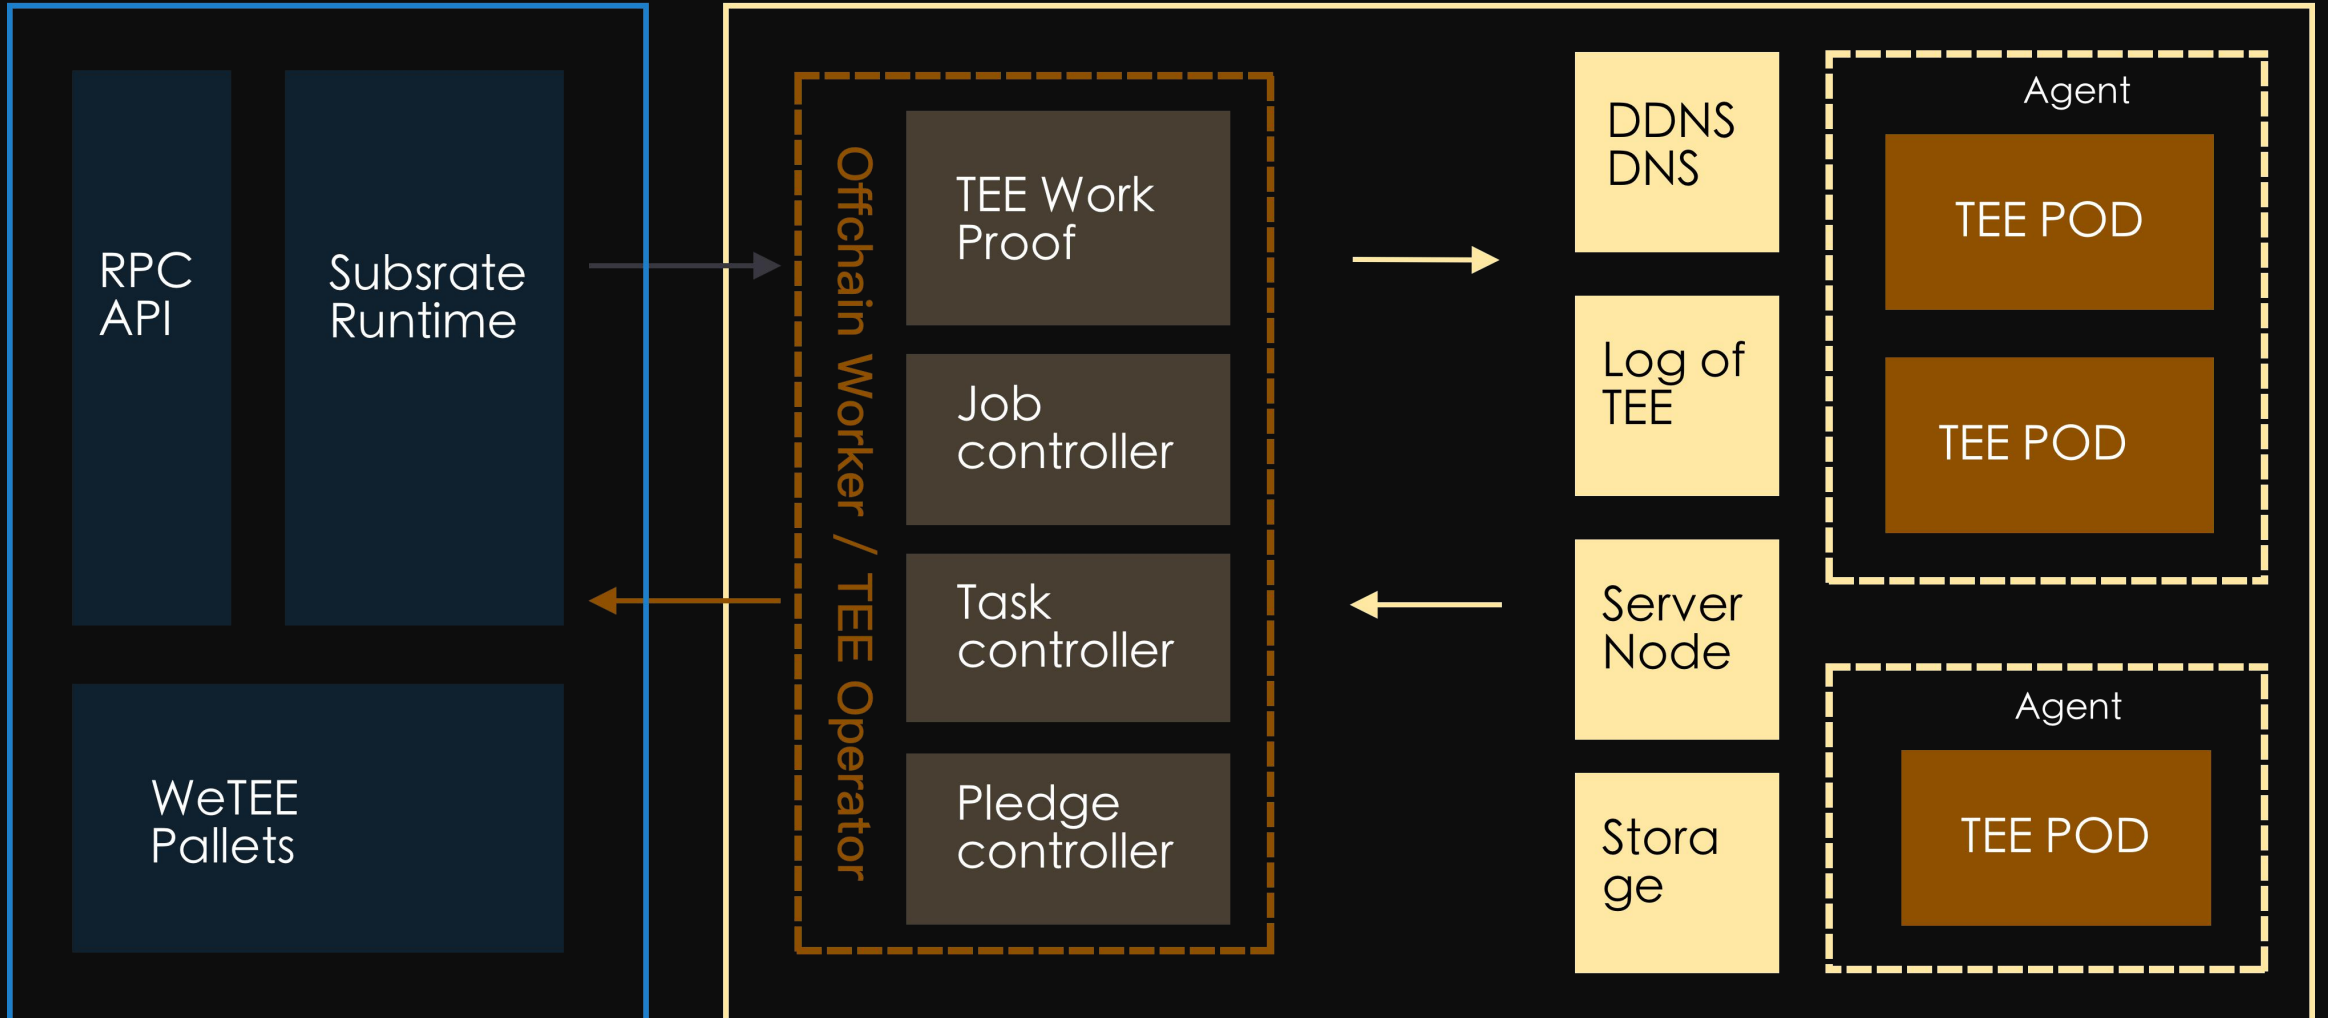

Assisting developers in rapidly transitioning Web2 applications to a blockchain-based decentralized application deployment platform.

Technical Architecture

Wetee Node

k8s/k3s cluster

On-chain Governance

The [WeTEE](#) network will govern the network using a democratic-centered governance mechanism similar to Polkadot OpenGov

Replace the board of directors with DAO and make on-chain decisions through reputation voting, allowing more people to participate in the governance of the chain, promoting better development of the community

Through voting decisions, any on-chain parameter can be changed. Here, you can participate in the development of [WeTEE](#) throughout the process

You can attend all project meetings and participate in the management of on-chain public property

DEMO

METEE

Team Member

Bai L

- 12—years full stack software development experience
- Solid knowledge and experience with various programming language i.e. Go, Dart, Javascript, Rust
- Blockchain & Substrate enthusiast

Nomad.

- 3—years UI / UX design experience
- 8—years senior product management experience, leading multiple Linux and Cloud—based products
- United nations sustainable development goals certificate Product Manager (UCPM) / Lean Product Manager (UCLPM)

Roadmap

- On-Chain worker mortgage / create
- On-Chain App create
- On-Chain task create
- Worker K8S operator
- Worker App deploy
- Worker task deploy
- TEE image build-tool

- Worker attestation
- WeTEE DApp front end
- WeTEE test network
- Launch DTIM on WeTEE
- WeTEE main network
- Auction Kusama slots
- On-Chain App Store

- Integrate paritytech frontier, compatible with ETH accounts and EVM
- WeTEE & DTIM are compatible with Ethereum, achieving heterogeneous cross-chain functionality
- Web DApp login with metamask

- Intel TDX's new libos proposal for a new solution
- AMD SEV's new libos proposal for a new solution
- Ink! and Solidity's runtime environment
- TEE and contract invocation protocol

2023 Q4 ----- 2024 Q1 ----- 2024 Q2 ----- 2024 Q3

Financing Plan

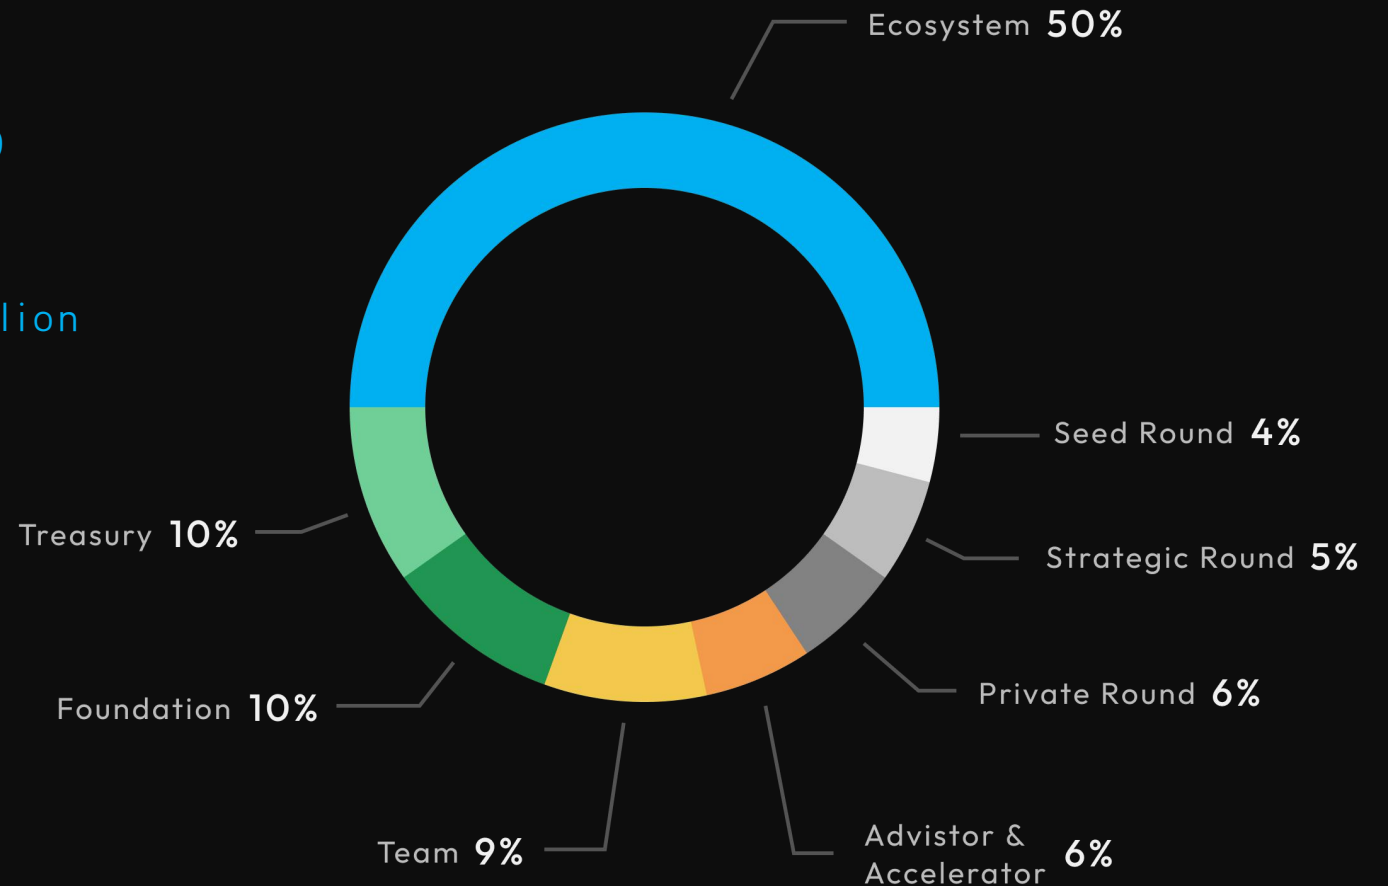

■ ■ ■ Total Token Supply: 1000000000

■ ■ ■ Seed round valuation of \$5 million

■ ■ ■ Financing Token 3%, \$150k

■ ■ ■ Cliff 3 months

■ ■ ■ Vesting 24 months
